Config Watch #14

November 11, 2026 · MarketMania Research · Weekly series

WEEKLY · CONFIG WATCH · Issue #14 · the ceiling rises and the board with it · Issue date November 11, 2026 · Language English · Methodology v1.1 + Config Watch amendments (approved 12.08, hash e66c7e8c864a2233)
Search windows: **WK** Nov 2-9, 2026 and **M30** Oct 12-Nov 9, 2026 -- both frozen and Monday-aligned (WK = Mon Nov 2 00:00 -> Sun Nov 8 23:59 UTC; M30 = Mon Oct 12 00:00 -> Sun Nov 8 23:59 UTC, 4 full weeks), sharing the cut-off edge Mon Nov 9 00:00 UTC, so slots dated Nov 9 fall outside both. Slots fall inside the window; trades settle past its right edge at their horizon -- the same 2-3 day luft the engine has used since issue #1 and that the live presets run on.

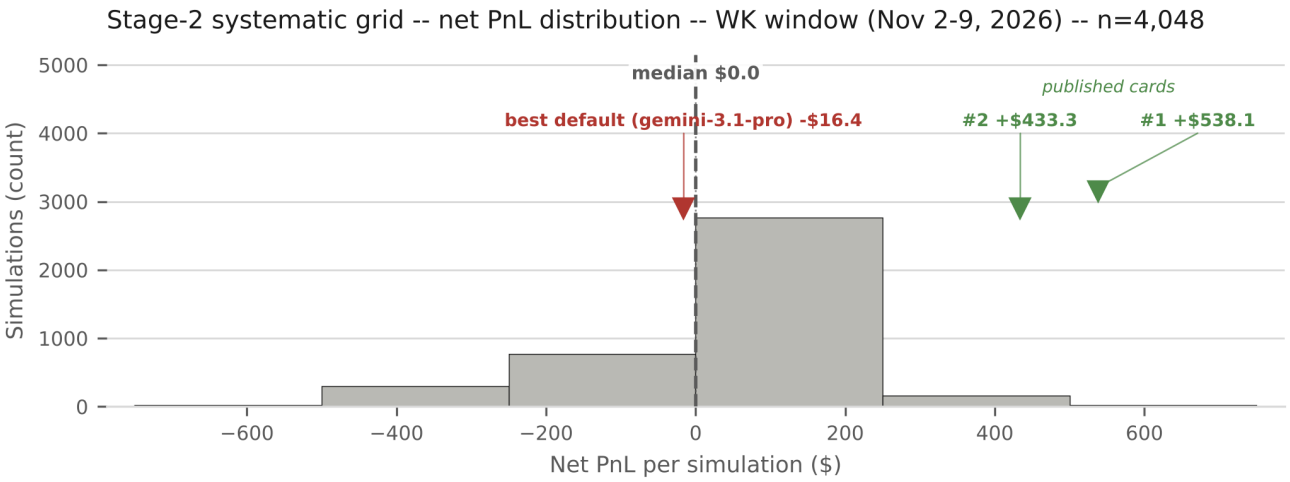

RESEARCH SNAPSHOT			
15,952 simulations, 0 errors, in two frozen collects	**WK** Nov 2-9, 2026	**M30** Oct 12-Nov 9, 2026	7-stage search: scan -> grid -> refine -> stake sweep -> per-ticker -> OOS replays
engine 1.1; **$1,000** deposit, **10x** leverage	stake is **universe-aware** from sim #1 (table below)	maturity gate: >=**15** closed (WK) / >=**20** (M30)	criteria frozen in writing before launch (w393 plan)
walk-forward: **87** past cards + **4** live presets replayed verbatim on both windows	**24 of 87** past cards Survive (net-positive on both windows)	stability: **4** configs across WK and M30 (night run)	models: **7** (3 lineage axes in M30; WK on the new builds)
best WK council **+$538.1** (+53.8%)	best M30 council **+$1,508.6** (+150.9%)	zero-trade cells: **1,739** (weekly) / **2,333** (night run)	margin-skip alerts on leaders: **0** (WK) / **0** (M30) rows

KEY FINDING · OBSERVATION (the ceiling rises and the board with it)

The ceiling of the fresh search moved from +$333.6 to +$538.1 on the week and 39 of the 87 cards this series has published are net-positive on that same week, and under the standing two-window rule 24 of the 87 Survive: 34 clear the month, 39 clear the week.

TL;DR

- OBSERVATION -- **The standing board grew to 87 cards.** Issue #13 kept 7 of its 79 past cards under the same rule; this issue replays **87 cards** -- issues #1, #2, #3, #4, #5, #6, #7, #8, #9, #10, #11, #12, #13, Monthly Config Watch #1, #2 and #3 and Quarterly Config Watch #1 -- on two fresh windows, and **24 of the 87 Survive** (net-positive on both). On the week alone 39 of 87 are positive, on the four-week window 34 of 87. Issue #13's own week champion, replayed verbatim, makes -$8.7 on the week and +$718.1 on the month.
- **The search ceiling, window by window.** The best mature council on WK makes +$538.1 (+53.8% of a $1,000 deposit, 78.9% win rate, 4.7% maxDD, 19 closed) against issue #13's +$333.6; on M30 it makes +$1,508.6 (+150.9%, 88.6% win rate, 27.7% maxDD, 35 closed) against issue #13's +$1,046.9. The grids behind them: median $0.0 with 32.3% positive across 4,048 WK cells (24 of them above +$500), median $0.0 with 49.0% positive across 3,856 M30 cells (457 above +$500).
- **Calibration and the universe, window by window.** Across the whole stage-2 grid calibration improves 14.0% of the 1,382 matched WK pairs (mean -$40.9) and 23.0% of the 1,288 matched M30 pairs (mean -$91.8); pooled, 18.3% of 2,670. On the cards, **no published WK council is a calibrated cell** and **no M30 card is a calibrated cell**. The mature net top-10 leans on one universe per window: SOL+XRP on WK (6 of 10 slots), SOL+XRP on M30 (10 of 10).
- **The stability board, an eleventh reading of the same pair.** The night collect computes WK and M30 in one pass, so this issue's cross-window board is measured on the two windows the issue prints -- and **4 configurations** are in the mature net top-40 of both. Issue #13 measured the same pair one week earlier and held 0, issue #12 the week before that 1, issue #11 0, issue #10 4, issue #9 7, issue #8 4, issue #7 16, issue #6 9, issue #5 0 and issue #3 21. The hand-tuned anchor keeps its standing measurement against the whole mature field of each window -- 211 of 1,254 mature WK configs and 734 of 2,581 mature M30 configs beat it on win rate, maxDD and smoothness at the same time. Net PnL stays the headline board (continuity with issues #1-#13).

Net PnL across all 4,048 stage-2 grid sims, WK window (Nov 2-9, 2026), universe-aware stake throughout. Grid median **$0.0**, 32.3% positive (issue #13's week: median $0.0, 22.8% positive; its month: $0.0, 34.3% positive). The spike at $0 is mostly cells whose entry filters produced no trades (1,649 zero-trade sims on this window). Range -$610.4 to +$703.2; 24 cells finished above +$500. Red marker = best solo default at table stake; green = the published cards. The same board definition one week earlier put its top-5 at +$333.6 down to +$247.1; this week it runs +$538.1 down to +$440.7 -- a property of the week, not evidence about either issue's cards. The M30 histogram appears after the M30 cards. Source: grid_hist_wk.json.

Why it matters

MarketMania publishes default LLM-council trading configs. This series asks one narrower question every week: how much apparent performance can large-scale in-sample search extract -- and how much of it survives out-of-sample? Issue #1 set the in-sample baseline, issue #2 delivered the first walk-forward verdict (brutal), issue #3 the second (the opposite), issue #4 the third on two windows at once, issue #5 the fourth, issue #6 the fifth, issue #7 the sixth, issue #8 the seventh, issue #9 the eighth, issue #10 the ninth, issue #11 the tenth, issue #12 the eleventh and issue #13 the twelfth, each on the widest board the series had had. Issue #14 delivers the thirteenth, on a board that carries every generation the series has produced: 87 cards from thirteen weekly issues, the first three monthly ones and the first quarterly one, each replayed verbatim on the same two fresh windows. That is the point of the exercise -- a rule that is applied to a growing, never-pruned list is the only walk-forward number that cannot be chosen after the fact.

How we searched

Two frozen collects, run to the same plan with the criteria frozen in writing *before* launch (w393 plan) and printed into the meta of every JSON deliverable: the weekly collect over the WK window, and the night collect, which sweeps the M30 window and the same WK week together in one pass. Each stage below prints **weekly + night** and both totals are printed whole; no calendar-month window is computed this issue. **Every WK number in this issue comes from the weekly collect and every M30 number from the night collect** -- the night run's own second pass over the WK week is used for one thing only, the cross-window stability board, and no number from it is printed beside a weekly-collect number.

- **1. Scan (s1)** -- 476 + 952 sims across council compositions and coarse settings.
- **2. Systematic grid (s2)** -- 4,048 + 7,712 sims sweeping the declared axes (archetype, FH/TF, entry filters, universe, council size, membership, TP/SL source, ladder, break-even, TP/SL shift, calibrate and stake) -- the denominator for every distribution claim below.
- **3. Refinement: ladder + stake sweep (s2b+s3b)** -- 120 + 246 sims around the grid winners.
- **4. Preset neighbourhood grid (s2p)** -- 53 + 106 sims: one-knob neighbours of the live presets that have a local grid this issue.
- **5. Per-ticker probes (s5t)** -- 60 + 116 sims: best finalists split onto single coins.
- **6. Dedicated per-ticker (s6t+s6tc)** -- 555 + 1,085 sims: a compacted independent per-coin grid plus calibrate twins (the standing branch from issue #2).
- **7. OOS replays (s4cw13+s4cw13o+s4cwm3+s4cwm3o+s4cw12+s4cw12o+s4cw11+s4cw11o+s4cw10+s4cw10o+s4cwq1+s4cwq1o+s4cw9+s4cw9o+s4cwm2+s4cwm2o+s4cw8+s4cw8o+s4cw7+s4cw7o+s4cw6+**

s4cw6o+s4cw5+s4cw5o+s4cw4+s4cw4o+s4cwm1+s4cwm1o+s4cw3+s4cw3o+s4cw2+s4cw2o+s4cw1+s4pre) -- 166 + 257 sims: every published card and all four live presets, verbatim, on every fresh window, plus origin re-runs of the Monthly-3, issue-13 and issue-12 cards for the drift baseline.

Total 15,952 simulations (5,478 weekly + 10,474 night), 0 errors, 4,072 zero-trade cells (1,739 + 2,333); stage sums reconcile exactly in each collect (counts.by_stage). The axis grid was NOT widened relative to issue #13 (anti-overfit rule): the replay branch grew by two cohorts, the search space did not. Equity series, grid histograms, baselines and the calibrate pack are produced inside the same two collects -- there is no separate same-day extras pass this issue.

Stake: universe-aware from simulation #1 ($1,000 deposit)

Instruments in universe	Stake cap	Sweep values also simulated
1 coin	$450	$300 / $375
2 coins	$450	$300 / $375
3 coins	$300	$225 / $375
4 coins	$250	$200 / $300
5 coins	$200	$150 / $250

A $1,000 deposit cannot fund five concurrent $450 positions. Stake is a function of how many instruments the config trades, recomputed on every universe change and swept as its own axis; any simulated stake above the cap for its universe size is marked **concentrated** and excluded from the headline boards (it stays in the open data). Every card also prints **skipped_nofunds** -- entries the engine could not fund. Margin-skip alert rows on the leaders this issue publishes: 0 on WK (weekly collect) and 0 on M30 (night collect); the night collect raised 0 alerts in total, all of them on M30. Source: criteria in both collects.

Models under test (engine IDs; claude-opus-5.5 is stored as claude-opus-5-5): claude-fable-5, claude-opus-5.5, gpt-6.1-sol, deepseek-v4-pro, gemini-3.1-pro, qwen-3.8-max, grok-4.7. Three axes run as lineages -- **claude-opus-5.5 (incl. opus-5-era), gpt-6.1-sol (incl. 5.6-era), grok-4.7 (incl. 4.6-era)** -- across the model cutover at Oct 17, 2026 09:01 UTC, which lies inside this issue's M30 window (day 6 of 28) and before its WK week: Nov 2-8 is the third full week on the new builds. Published configs that named claude-opus-5, gpt-5.6-sol, grok-4.6 or grok-4.5 are replayed out-of-sample with the same lineage remap ([remap] rows); the three Monthly-3, five issue-13, five issue-12 and five issue-11 cards already name the heads. The vendors' names are Claude Opus 5.5, GPT-6.1 Sol and Grok 4.7.

TOP councils -- WK window (Nov 2-9, 2026)

#	Council	Coins	FH/TF	Net	Net %	maxDD	Trades	WR
#1	fable, opus, gemini, grok	SOL+XRP	4h/1h	**+$538.1**	+53.8%	4.7%	19	78.9%
#2	opus, gpt, grok	BNB+XRP	4h/4h	**+$433.3**	+43.3%	0.0%	17	88.2%

#	Ladder	BE	Shifts	Conf filter	Source	Entry	Positional	Stake
#1	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	farthest	3/0	reenter	$450
#2	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	farthest	2/0	reenter	$450

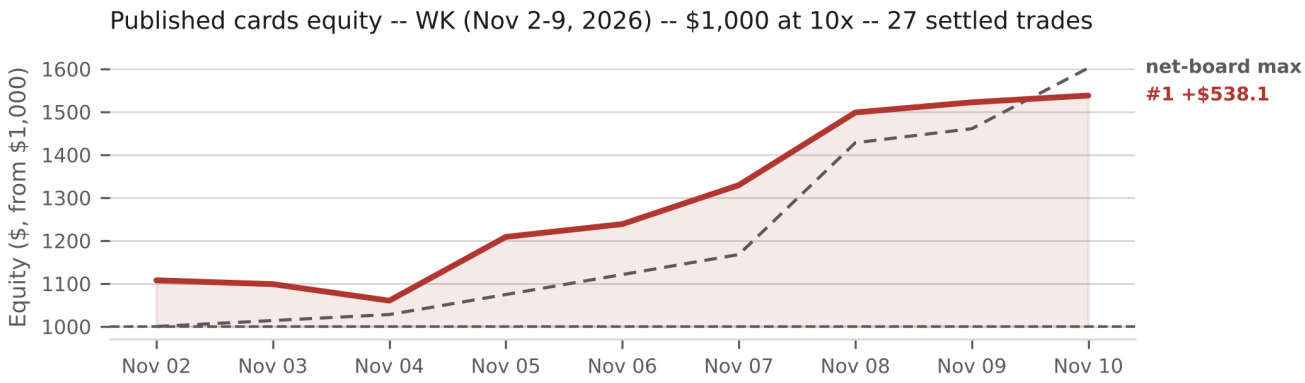

Against the 4,048-cell stage-2 grid on this window: card #1 lands in the +$500 to +$750 bucket (24 of 4,048 cells) and card #2 in the +$250 to +$500 bucket (164 cells); 24 cells in the whole grid finished above +$500 (grid median $0.0). Card percentiles exported this issue cover the raw net-board leaders and the replay rows, not the mature cards -- no percentile is claimed for the two cards themselves. Net % = net PnL as a percentage of the fixed $1,000 starting deposit; every simulation runs at **10x leverage** (liquidation modeled by the engine). Entry = max_sideways / max_diff_side.

Two councils are published on this window. The mature net board carries more than one universe: SOL+XRP holds 6 of its ten slots (card #1 among them), BNB+XRP 3 and single-coin XRP 1. Card #2 is the best mature multi-coin council outside card #1's universe (the pairwise-different-universes rule), and it comes off the mature net board itself (+$433.3 on BNB+XRP, R2 0.945, ulcer 0.00, 0.0% maxDD, 0 unfunded entries).

On the calibrate axis no card is a calibrated cell, where issue #13 published 1 of its 2 WK councils as calibrated cells. Card #1 runs the 2-coin table stake of $450. Neither card carries an unfunded entry.

OPEN IN SANDBOX marketmania.ai/s/cw14-wk1 marketmania.ai/s/cw14-wk2

Each link opens this exact frozen window; results visible without sign-in (embedded share signature). The codes are minted by the publish script before this file goes live; every card's full frozen query signature is in the open-data JSON next to its simulation index.

Daily settled equity for card #1 above ($1,000 start, 10x leverage, frozen window; #1 red -- fixed rank colors across all issues). A curve running past the window end is an open-at-cutoff trade settling at its horizon (the 2-3 day luft); the curve's last point reconciles to its config's net to the cent. The muted dashed line is the net-board maximum, drawn for contrast only: at 8 closed trades it sits below the >=15 maturity gate and is not a card. Card #2 has no daily series in this issue's equity pack, and the solo and smoothness series stay in the open data (equity.cards) -- the PDF carries one equity chart per window. Source: equity_wk.json.

TOP councils -- M30 window (Oct 12-Nov 9, 2026)

#	Council	Coins	FH/TF	Net	Net %	maxDD	Trades	WR
#1	gpt, grok	SOL+XRP	1d/4h	**+$1,508.6**	+150.9%	27.7%	35	88.6%
#2	opus, gpt, deepseek	BTC+ETH+ SOL+BNB+XRP	1d/1d,4h	**+$671.6**	+67.2%	0.0%	23	100.0%

#	Ladder	BE	Shifts	Conf filter	Source	Entry	Positional	Stake
#1	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	farthest	1/0	reenter	$450
#2	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	farthest	3/1	reenter	$200

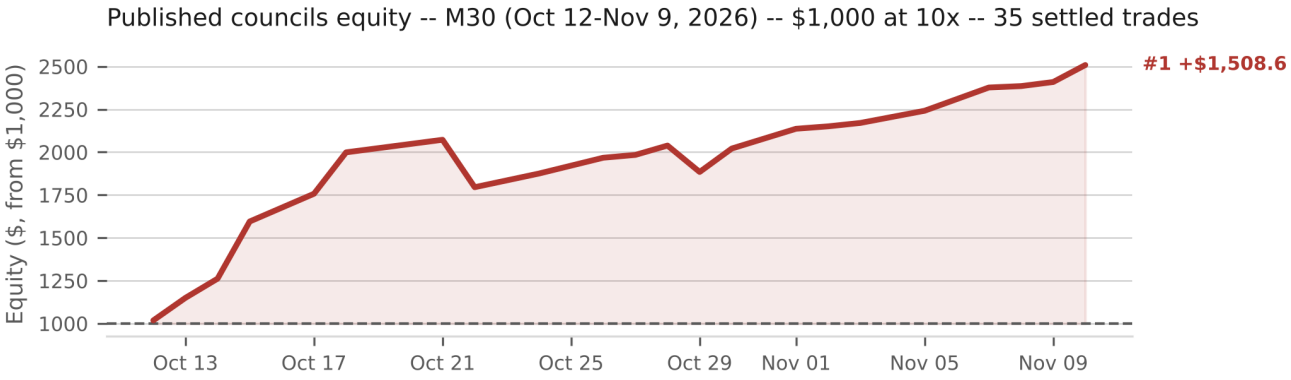

Against the 3,856-cell stage-2 grid on this window: card #1 is the same simulation as the raw net-board leader (i=1765), so its exported percentile is the card's -- above **99.7%** of the grid; card #2 lands in the +$500 to +$750 bucket (281 cells) with 88.1% of the grid finished below it. Grid median $0.0, 457 of the 3,856 cells above +$500. Net % = net PnL as a percentage of the fixed $1,000 starting deposit; every simulation runs at **10x leverage** (liquidation modeled by the engine). Entry = max_sideways / max_diff_side.

Only two councils are published on this window too. 10 of the ten slots of the M30 mature net board are SOL+XRP, so the pairwise-different-universes rule admits exactly one; #2 is the best mature multi-coin council outside that universe on the quality boards (off the **WR** board: +$671.6 on BTC+ETH+SOL+BNB+XRP, R2 0.820, 0.0% maxDD, 0 unfunded entries). Read the cards as two universes deep, not three.

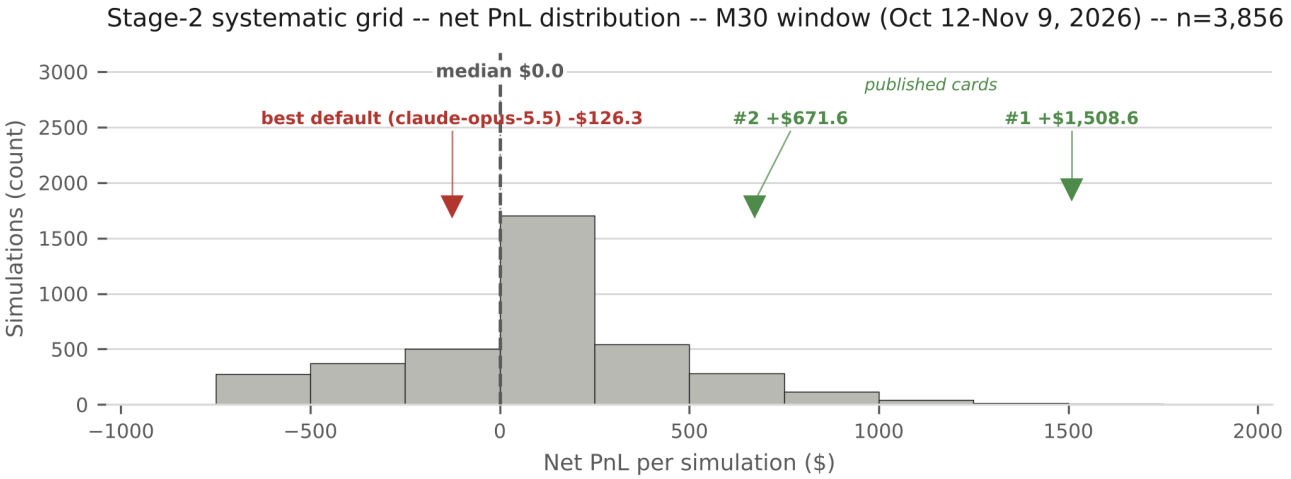

On the calibrate axis no M30 card is a calibrated cell, where no published WK council is a calibrated cell -- the same axis, read on two windows (Calibrate axis below). Card #1 pays for its +$1,508.6 with a **27.7% drawdown** on 35 closed trades and 0 unfunded entries, card #2 with 0.0% on 23 and 0. The M30 mature pool is 2,581 configs against 1,254 on WK, because four weeks clear the >=20-trade gate that one week does not.

OPEN IN SANDBOX **marketmania.ai/s/cw14-m301** **marketmania.ai/s/cw14-m302**

Each link opens this exact frozen window; results visible without sign-in (embedded share signature). The codes are minted by the publish script before this file goes live; every card's full frozen query signature is in the open-data JSON next to its simulation index.

Daily settled equity for card #1 above ($1,000 start, 10x leverage, frozen window; #1 red -- fixed rank colors across all issues). A curve running past the window end is an open-at-cutoff trade settling at its horizon (the 2-3 day luft); its last point reconciles to the card's net to the cent. There is no contrast line on this window: the net-board maximum is the same simulation as card #1 (i=1765, 35 closed, above the >=20 maturity gate). The solo, Calmar, WR and smoothness series stay in the open data (equity.cards) -- the PDF carries one equity chart per window. Source: equity_night.json.

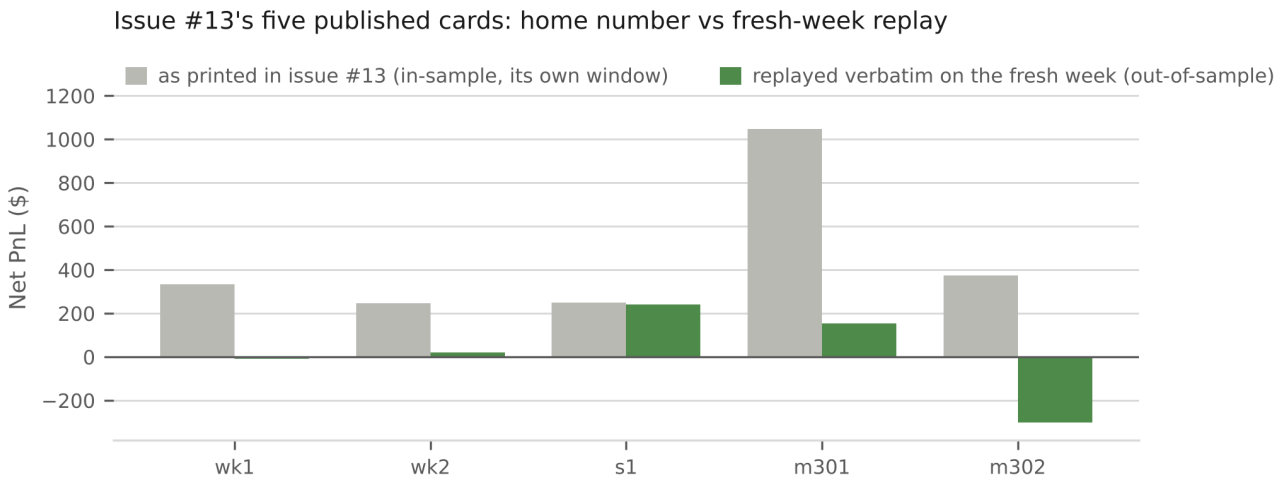

Net PnL across all 3,856 stage-2 grid sims, M30 window (Oct 12-Nov 9, 2026), universe-aware stake throughout. Grid median **$0.0**, 49.0% positive against 32.3% on the week (issue #13's month: median $0.0, 34.3% positive). The spike at $0 is mostly cells whose entry filters produced no trades (818 zero-trade sims on this window). Range -$808.8 to +$1,775.8; 457 cells finished above +$500, against 24 on the week. Red marker = best solo default at table stake; green = the published cards. Source: grid_hist_night.json.

Walk-forward: the standing OOS verdict

Every config this series has ever published -- all 87 cards from issues #1, #2, #3, #4, #5, #6, #7, #8, #9, #10, #11, #12, #13, Monthly Config Watch #1, #2 and #3 and Quarterly Config Watch #1 -- replayed VERBATIM (same knobs, same stake as printed, no re-tuning) on both fresh windows, plus the four hand-tuned presets running live on the platform, listed first. The 12 cards of the three monthly issues and the quarterly one are judged by the weekly rule, like every other row. The replays and their origin re-runs cost 166 simulations in the weekly collect and 257 in the night collect, which replays every row on both of its own windows.

Verdict rule, unchanged since issue #2. Survived = net-positive on BOTH fresh windows; **Faded** = net-negative on at least one. The live presets, the monthly cards and the quarterly cards are judged by the same rule. New WK is pure out-of-sample for every row -- the week begins exactly at issue #13's right edge (Nov 2). New M30 (Oct 12-Nov 9, 2026) shares 21 of its 28 days with issue #13's own M30 window (shared stretch Oct 12-Nov 1), 14 of its 28 days with issue #12's own M30 window (shared stretch Oct 12-25), 7 of its 28 days with issue #11's own M30 window (shared stretch Oct 12-18) and 20 of its 28 days with Monthly Config Watch #3's calendar-October window (shared stretch Oct 12-31), so for those four cohorts that column is decay context rather than pure out-of-sample: the same asymmetry issues #3, #4, #5, #6, #7, #8, #9, #10, #11, #12 and #13 disclosed for their own second columns.

Issue #13's 5 published cards: the number its own issue printed (grey, in-sample on its own window) against the same configuration replayed verbatim on this week (green, out-of-sample). 2 of the 5 are net-negative on the fresh week; the 2 M30 cards were measured at home on a four-week window and the 3 WK cards were on a one-week window, so the grey bars are not all the same kind of number. Source: oos_cw13_wk.json + issue #13 open data.

n in parentheses; * = fewer than 10 closed trades (insufficient cell); + = non-zero skipped_nofunds (entries the engine could not fund -- the printed economics are then not the economics that ran). Home = the number the card's origin issue printed; the live presets have no home issue. [conc] = stake above this issue's cap for its universe size; [remap] = a superseded model id replayed on its lineage head (grok-4.5 / grok-4.6 -> grok-4.7, claude-opus-5 -> claude-opus-5.5, gpt-5.6-sol -> gpt-6.1-sol; none of the Monthly-3, issue-13, issue-12 or issue-11 rows carries it). Verdict rule: Survived = net-positive on both fresh windows, Faded = net-negative on at least one. Survivors are tinted green. The 87 cards are 81 distinct configurations window aside (cwq1-q1 = cw7-wk1; cwq1-s1 = cw9-s1; cwm2-m1 = cw8-m302; cwm2-m2 = cw8-m301; cwm1-s1 = cw3-s2; cw3-m301 = cw3-wk1): the two rows of each pair carry the same WK and M30 numbers.

Counted: 24 of 87 past cards **Survive** both fresh windows (issue #13 on its two windows: 7 of 79) -- by cohort 2 of 3 Monthly-3 cards, 3 of 5 issue-13 cards, 3 of 5 issue-12 cards, 4 of 5 issue-11 cards, 2 of 5 issue-10 cards, 1 of 3 Quarterly-1 cards, 0 of 5 issue-9 cards, 0 of 3 Monthly-2 cards, 0 of 5 issue-8 cards, 1 of 5 issue-7 cards, 1 of 5 issue-6 cards, 1 of 4 issue-5 cards, 0 of 5 issue-4 cards, 1 of 3 Monthly-1 cards, 2 of 6 issue-3 cards, 2 of 8 issue-2 cards, 1 of 12 issue-1 cards. Taken a window at a time: 39 of 87 are positive on the week and 34 of 87 on the four weeks, and the two columns do not nest: a row can clear one and fail the other, so both windows remove cards. The survival curve by generation, each on its own first, second, third, fourth, fifth, sixth, seventh, eighth, ninth, tenth, eleventh, twelfth and thirteenth fresh week, reads: issue-1 50.0% -> 91.7% -> 8.3% -> 16.7% -> 25.0% -> 91.7% -> 8.3% -> 8.3% -> 0.0% -> 58.3% -> 50.0% -> 8.3% -> **16.7%** now (2 of 12); issue-2 100.0% -> 50.0% -> 12.5% -> 25.0% -> 62.5% -> 75.0% -> 25.0% -> 25.0% -> 62.5% -> 0.0% -> 37.5% -> **62.5%** now (5 of 8); issue-3 33.3% -> 33.3% -> 33.3% -> 83.3% -> 33.3% -> 33.3% -> 16.7% -> 66.7% -> 66.7% -> 16.7% -> **33.3%** now (2 of 6); issue-4 20.0% -> 0.0% -> 80.0% -> 80.0% -> 60.0% -> 0.0% -> 80.0% -> 20.0% -> 40.0% -> **20.0%** now (1 of 5); Monthly-1 66.7% -> 0.0% -> 33.3% -> 100.0% -> 66.7% -> 0.0% -> 66.7% -> 0.0% -> 0.0% -> **33.3%** now (1 of 3); issue-5 25.0% -> 75.0% -> 50.0% -> 75.0% -> 0.0% -> 25.0% -> 100.0% -> 25.0% -> **25.0%** now (1 of 4); issue-6 80.0% -> 40.0% -> 60.0% -> 0.0% -> 80.0% -> 40.0% -> 20.0% -> **80.0%** now (4 of 5); issue-7 80.0% -> 80.0% -> 0.0% -> 40.0% -> 60.0% -> 40.0% -> **40.0%** now (2 of 5); issue-8 40.0% -> 0.0% -> 60.0% -> 0.0% -> 0.0% -> **20.0%** now (1 of 5); Monthly-2 100.0% -> 0.0% -> 0.0% -> 33.3% -> 0.0% -> **33.3%** now (1 of 3); issue-9 0.0% -> 60.0% -> 20.0% -> 0.0% -> **60.0%** now (3 of 5); Quarterly-1 33.3% -> 100.0% -> 33.3% -> 0.0% -> **66.7%** now (2 of 3); issue-10 80.0% -> 40.0% -> 20.0% -> **40.0%** now (2 of 5); issue-11 80.0% -> 60.0% -> **80.0%** now (4 of 5); issue-12 20.0% -> **60.0%** now (3 of 5); issue-13 **60.0%** now (3 of 5); Monthly-3 **66.7%** now (2 of 3). Live presets: 0 of 4 Survive, 1 of 4 positive on the week, 0 of 4 on the month.

The four live presets lead the table by standing rule. On the week: preset 4h4 -$62.1 on 1 closed, preset bc2 -$53.0 on 7 closed, preset sol +$124.5 on 7 closed, preset xrp -$198.1 on 2 closed -- 1 of the four net-positive. On the four-week window: preset 4h4 -$477.4 on 18 closed, preset bc2 -$79.4 on 18 closed, preset sol -$404.3 on 28 closed, preset xrp -$414.0 on 1 closed -- 0 of four. 0 Survive both. **sol** and **xrp** are marked [conc]: both run a $900 stake on a single coin, twice the $450 cap the stake table sets for a 1-coin universe, so their printed economics assume funding this issue's own rule would not grant. Passports for all four are in the

open data (presets_recon_wk.json and presets_recon_night.json).

Origin re-runs (drift baseline). Re-simulating the Monthly-3 cards on their OWN origin windows today lands within $0.0..$0.0 of the printed Monthly-3 numbers, the issue-13 cards within -$72.0..$0.0 of theirs and the issue-12 cards within -$122.6..$0.0; 11 of the 13 re-runs reproduce to the cent. The widest deviation is cw12-wk1 (+$580.5 printed, +$457.9 today) -- cards with positions still open when their origin window closed re-run to their settled result; issue #13 printed open positions for cw13-s1 and issue #12 for cw12-wk1. Snapshot principle: no past issue is restated; the full drift table is in the open data (oos_walk_forward.drift_baseline).

Honest read. The fresh search and its own back catalogue moved in the same direction this week. On the fresh week 39 of 87 past cards are net-positive -- issue #13 counted 16 of 79 on its own week -- and the ceiling of the fresh search moved to +$538.1 from +$333.6. On the fresh four weeks 34 of 87 are net-positive. Same replay machinery, same frozen knobs; what changed is the window and the size of the board. Three things keep this from being a statement about search. The board is not a fixed sample: it grows every issue and nothing is ever pruned, so a share computed on 87 cards is not comparable with one computed on 79 without saying which generations joined -- 8 of the 87 rows are new this issue. The month column is not clean evidence for four of the seventeen cohorts: it shares 21 of its 28 days with issue #13's own M30 window (shared stretch Oct 12-Nov 1), 14 of its 28 days with issue #12's own M30 window (shared stretch Oct 12-25), 7 of its 28 days with issue #11's own M30 window (shared stretch Oct 12-18) and 20 of its 28 days with Monthly Config Watch #3's calendar-October window (shared stretch Oct 12-31), so those cards are partly being scored on their own data. And the size of the in-sample number is not what decides the give-back on this board: the row that lost most on the week is cw1-7ds1 (-$562.7 on the week against +$417.8 printed at home), while the largest home number on the board, cwq1-q1 at +$2,271.8, made +$489.0. Thirteen fresh weeks of verdicts now: brutal, the opposite, split by window, the fourth, the fifth, the sixth, the seventh, the eighth, the ninth, the tenth, the eleventh, the twelfth, and this one. That is a series of weathers, not a strategy.

Calibrate axis: does TP/SL calibration help a config?

Matched pairs -- identical knobs, calibration OFF vs ON -- measured on net PnL. The table is the **whole stage-2 grid** of each window, and the **Both** row pools the two windows' pairs and nothing else. The board-leader slice is a second, separate measurement (20 WK pairs and 12 M30 pairs whose OFF or ON leg reached the top of a board); it is reported in the paragraph below and in the open data, and the two are never pooled together.

Window	Pairs	Calibrate wins	Mean delta	Best delta	Worst delta
WK	1,382	14.0%	-$40.9	+$246.3	-$505.5
M30	1,288	23.0%	-$91.8	+$376.7	-$980.3
Both	**2,670**	**18.3%**	**-$65.4**	**+$376.7**	**-$980.3**

The two windows answer the axis, and the whole-grid reading and the board-leader slice are separate measurements. On the week calibration improves 14.0% of the 1,382 matched pairs (mean -$40.9, median $0.0) and 12.5% of the 233 mature pairs (mean -$119.9); on the four weeks it improves 23.0% of 1,288 (mean -$91.8, median -$44.7) and 28.1% of the 637 mature pairs (mean -$135.6). Pooled over both windows the axis improves 18.3% of 2,670 pairs with a mean of -$65.4 -- a number that describes neither window on its own. The board-leader slices are separate: 10.0% of the 20 WK slice pairs improve (mean -$199.9, median -$213.4, OFF legs already at a median of +$532.9), and 0.0% of the 12 M30 slice pairs (mean -$146.5, OFF legs at +$1,454.2). Issue #13 measured a 14-pair WK slice (8 improving) and a 9-pair M30 slice (0). Where the axis reached the cards is visible above: 0 of the 2 published WK councils are calibrate=ON cells and 9 of the 53 WK finalists run it, while 0 of the 2 M30 cards are and 29 of the 53 M30 finalists do.

The open-data pack also carries a 400-pair export (calibrate_effect) per collect. Its delta distribution is not the population's (median -$123.1 against the WK grid's $0.0), so no claim in this section is computed from it; it is published for inspection only.

Secondary analysis -- solo-model top

Sidebar to the council narrative. Solo configs run inside the same pipeline and face the same gates: >=2 coins, the maturity gate for the window (>=15 closed on WK, >=20 on M30), one config per model.

Solo top -- WK (Nov 2-9, 2026)

#	Model	Coins	FH/TF	Net	Net %	maxDD	Trades	WR
#1	gpt	SOL+XRP	1d/1d,4h	**+$616.4**	+61.6%	5.2%	15	80.0%
#2	grok	BNB+XRP	4h/4h	**+$319.1**	+31.9%	5.9%	40	70.0%

#	Ladder	BE	Shifts	Conf filter	Source	Entry	Positional	Stake
#1	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	farthest	1/0	reenter	$450
#2	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	median	0/0	reenter	$450

2 solo cards on this window. Both qualifying solos run the 2-coin table stake of $450. The one single-coin row that outranks card #2 on the mature net board (grok on XRP at +$340.2) is excluded by the >=2-coin rule and appears under Per-ticker bests. Source: summary_wk.json top_mature_by_window_branch.

Solo top -- M30 (Oct 12-Nov 9, 2026)

#	Model	Coins	FH/TF	Net	Net %	maxDD	Trades	WR
#1	gpt	SOL+XRP	1d/4h	**+$1,775.8**	+177.6%	27.7%	47	89.4%

#	Ladder	BE	Shifts	Conf filter	Source	Entry	Positional	Stake
#1	50:40,100:60	on	TP -10 / SL +75	>=60 (each)	median	0/0	reenter	$450

One solo card, not two on M30. The mature solo board collapses onto gpt (SOL+XRP), so the one-config-per-model rule admits exactly one; the card carries 0 unfunded entries. Source: top_mature_by_window_branch in the night collect.

OPEN IN SANDBOX marketmania.ai/s/cw14-s1

Each link opens this exact frozen window; results visible without sign-in (embedded share signature). The codes are minted by the publish script before this file goes live; every card's full frozen query signature is in the open-data JSON next to its simulation index.

Council vs solo. On the week the best solo sits above the best council (+$616.4 vs +$538.1 on the mature board, 15 closed against 19, 5.2% drawdown against 4.7%). On the four weeks the best solo sits above the best council (+$1,775.8 vs +$1,508.6, 47 closed against 35, 27.7% against 27.7%). Same in-sample caveats apply to both sides.

Quality boards

Net PnL stays the primary board (continuity with issues #1-#13); four selection views sit on top of it at zero additional simulations. **Calmar-like** = net / max(maxDD, 1.0), positive net only; **WR board** = win rate among mature configs (>=15 closed on WK, >=20 on M30); **Smoothness** = R2 of a linear fit through the daily closed-equity series, mature rows with net > 0 and at least 5 days, ties broken by ulcer index; **Quality composite** = mean rank over net, Calmar-like, win rate and R2, lower is better. Top-3 of each board on each window below; all 15 rows of all eight boards are in the open-data JSON.

Board	Config	Coins	FH/TF	Net	WR	maxDD	Cls	R2
WK Calmar	opus, gpt, grok	BNB+XRP	4h/4h	+$433.3	88.2%	0.0%	17	0.945

[cal] = calibrate=ON cell; the board column names the window. Both Calmar boards are degenerate by construction -- their top rows sit at 0.0% (WK) and 0.3% (M30) maxDD, so the score collapses onto net PnL; read them as 'net among configs that barely drew down'. The Smoothness boards are the ones that can leave a window's dominant universe, and this issue neither does: the WK board's top row is a SOL+XRP config at R2 0.985 on a net of +$177.5, the M30 board's a SOL+XRP config at R2 0.985 on +$1,162.8, each inside the universe its window's mature net top-10 leans on. That trade -- straightness bought with size -- is exactly what the board exists to expose. The M30 boards are drawn from a mature pool of 2,581 configs against 1,254 on WK, because four weeks clear a >=20-trade gate that one week does not.

Stability, and what it is across this issue. The board is defined as **mature net top-40 on BOTH windows** of the run that computes it. The run that produced it here is the night collect, whose two windows are **WK and M30** -- the same two windows this issue prints, computed in a second execution of the WK plan -- so this issue's board reads **stable across WK and M30**. **4 configurations qualify.** All of them SOL+XRP, 0 councils and 4 clean (zero unfunded entries on both windows); the top three by rank sum are solo gpt; solo gpt; solo gpt. The shared board is narrower than either window's own: 9 of the 20 rows exported from its WK board are BNB+XRP; all 20 of the 20 rows exported from its M30 board are SOL+XRP, and no row exported from one window's mature board appears on the other's. The count is not comparable with issue #4's 25 (its board was measured across M30 and the calendar month); the boards measured across WK and M30 were issue #13's, at 0, issue #12's, at 1, issue #11's, at 0, issue #10's, at 4, issue #9's, at 7, issue #8's, at 4, issue #7's, at 16, issue #6's, at 9, issue #5's, at 0, and issue #3's, at 21. Full list in the open data (stability).

Hand-tuned baseline vs the grid

Standing section, eleventh issue. One hand-tuned configuration is treated as the reference the search has to beat -- not on net PnL, where any large search wins by construction, but on the three properties a configuration is actually tuned for: **win rate, shallow drawdown and a straight equity line**. The reference (referred to below as the **hand-tuned anchor**) is the live preset 1d_3_llm_BC2_v02, a 3-model 1d council on SOL+XRP at the $450 two-coin stake; it is distinct from the pre-search hand-tuned set A/B/C carried in Baselines below. Its replay row is in the walk-forward table above; here it is the yardstick.

Beat rule (frozen with the criteria): a config beats the anchor only if it does so on all three at once -- win rate higher, maxDD lower and smoothness R2 higher -- among mature, non-concentrated search rows. Net PnL is not part of the rule; it is reported next to the winners so the cost of the improvement is visible.

The anchor on each window

Window	Config	Coins	FH/TF	Net	WR	maxDD	R2	Ulcer	Cls
WK	**Hand-tuned anchor (1d_3_llm_BC2_v02)**	SOL+XRP	1d/1d	-$53.0	71.4%	33.3%	0.121	18.90	7
M30	**Hand-tuned anchor (1d_3_llm_BC2_v02)**	SOL+XRP	1d/1d	-$79.4	72.2%	53.7%	0.083	27.50	18

211 of the 1,254 mature WK configs (16.8%) clear all three bars at once, and 734 of the 2,581 mature M30 configs (28.4%). The anchor's own two windows are different rows: on the week -$53.0 net at 71.4% win rate with a 33.3% drawdown, an R2 of 0.121 and 7 closed trades; on the four weeks -$79.4 at 72.2%, a 53.7% drawdown, an R2 of 0.083 and 18 closed. The week row is thin against the >=15 gate the search rows must pass (the anchor is exempt from that gate by construction: it is the reference, not a candidate). Read against net PnL, all 10 of the 10 best WK winners by net also beat it on net PnL; all 10 of the 10 best M30 winners by net also beat it on net PnL. The share itself moves with the window (16.8% of the WK field, 28.4% of the M30 field), so read it as one field at a time, not as a property of the anchor.

Per-ticker bests

Which coin was extractable this window, and by what. Single-coin results are excluded from the council cards by rule (idiosyncratic-coin risk) and reported here, never ranked against the cards. The dedicated per-coin branch contributed 555 + 1,085 sims -- a compacted grid, one best per coin per window; the branch tag in brackets says which kind won.

WK (Nov 2-9, 2026)

Coin	Best config (branch)	FH/TF	Net (trades)
BTC	fable, opus, gpt, gemini, grok [council]	4h/1h	+$120.9 (5) *
ETH	gemini [solo]	1d/1d,4h	+$282.6 (2) *
SOL	fable, gemini [council]	1d/1d	+$502.5 (5) *
BNB	opus, gpt, deepseek [council]	1d/1d	+$236.0 (3) *
XRP	gemini, grok [council]	4h/4h	+$440.7 (29)

M30 (Oct 12-Nov 9, 2026)

Coin	Best config (branch)	FH/TF	Net (trades)
BTC	gpt [solo]	1d/4h	+$243.5 (10)
ETH	gpt [solo]	1d/1d,4h	+$739.1 (27)
SOL	gpt [solo]	1d/1d	+$1,119.5 (23)
BNB	gemini [solo]	1d/1d	+$340.9 (7) *
XRP	gpt [solo]	1d/4h	+$898.1 (22)

n in parentheses; * = fewer than 10 closed trades (thin -- direction only). 0 of the ten winners run calibrate ON; 4 of the five WK winners and 0 of the five M30 winners are councils.

The reads. On the week SOL leads at +$502.5 and 4 of the five rows are thin -- 2 to 29 closed trades against a 15-trade gate. On the four weeks 1 of the five rows is thin: 7 to 27 closed, SOL leading at +$1,119.5, and the same coin leads both windows. The 1d horizon wins 3 of the five WK coins and 5 of the five M30 coins. **Winner's curse applies to this whole table**: each row is the maximum of a per-coin grid, biased high by selection alone, and none has an out-of-sample read until next issue.

Baselines

Three independent reference points, none of them search output, re-simulated fresh on both of this issue's frozen windows inside the same two collects (engine 1.1): the engine solo default for each of the 7 models, the default council-of-7, and the pre-search hand-tuned set A/B/C carried since issue #1. The tables show the universe-aware **table-stake** run -- this issue's canonical mode ($200 for the 5-coin defaults; A and B already at their $300 3-coin cap; C moves $400 -> $450 on 2 coins) -- with the best and worst of the seven solo defaults on each window; all eleven rows per window and both stake modes are in the open data.

WK (Nov 2-9, 2026)

Baseline	Net PnL	Trades	WR	maxDD
Best solo default (gemini-3.1-pro)	-$16.4 *	128	56%	2.1%
Worst solo default (grok-4.7)	-$67.5 *	304	63%	6.8%
Council-of-7 default	-$3.2 *	147	70%	1.3%
Hand-tuned config A (pre-search)	+$218.9	9	78%	12.5%
Hand-tuned config B (pre-search)	+$159.7	21	76%	5.8%
Hand-tuned config C (pre-search)	-$53.1	1	0%	5.3%

M30 (Oct 12-Nov 9, 2026)

Baseline	Net PnL	Trades	WR	maxDD
Best solo default (claude-opus-5.5)	-$126.3 *	800	63%	12.7%
Worst solo default (deepseek-v4-pro)	-$245.9 *	1044	55%	24.6%
Council-of-7 default	-$65.5 *	551	65%	7.5%
Hand-tuned config A (pre-search)	+$611.1	32	81%	25.3%
Hand-tuned config B (pre-search)	-$48.7 *	96	63%	46.6%
Hand-tuned config C (pre-search)	-$358.2 *	18	50%	38.0%

* = non-zero skipped_nofunds at table stake. On the 5-coin defaults those counts are the stake table doing its job: at $200 a $1,000 deposit funds at most five concurrent positions while the defaults fire hundreds of entries per window (99 to 322 skipped each on the week, 543 to 1,293 on the four weeks). The other five solo defaults run between the two printed rows on each window. **The conclusions do not change between modes**: on WK they do so for every row, and on M30 they do so for every row. 2 of the three hand-tuned configs are already at their own table cap, so their two modes are identical on both windows. Source: baselines_wk.json (22 sims) and baselines_night.json (44 sims, of which 22 are the M30 half), inside this issue's two collects.

Every engine default lost money on both windows; the hand-tuned set split on both windows. On WK the seven solo defaults run -$16.4 to -$67.5 at table stake, the council-of-7 -$3.2, and the three hand-tuned configs A +$218.9, B +$159.7, C -$53.1 -- 2 of the three positive. On M30 the defaults run -$126.3 to -$245.9 solo (council-of-7 -$65.5) and the three hand-tuned configs A +$611.1, B -$48.7, C -$358.2 -- 1 of the three positive. The upper half of the standing ordering (search > hand-tuned > defaults) holds on both windows, in-sample as ever -- the fresh search makes +$538.1 on the week against a best baseline of +$218.9, and +$1,508.6 on the four weeks against +$611.1. The live presets are a separate row of evidence: 1 of the four is net-positive on the week and 0 of four on the month (walk-forward table above), and 2 of them run stakes above this issue's cap.

Live presets & preset neighbourhoods

Four hand-tuned configurations trade live on the platform (not search output, distinct from the pre-search A/B/C set): preset bc2 = '1d_3_llm_BC2_v02'; preset 4h4 = '4h_4_llm_v02'; preset sol = 'Sol'; preset xrp = 'XRP'. Their replay rows lead the walk-forward table; passports and window detail are in the open data (presets_recon_wk.json and presets_recon_night.json). The neighbourhood grid asks a narrower question: does a one-knob neighbour beat the preset as configured? Two of the four have a local grid this issue (53 cells per window); the two single-coin presets do not (0 cells -- the local grid is not built for them, so no neighbour claim is made about either).

Live preset	Window	As configured	Best neighbour in local grid	Cells	Verdict
preset bc2	WK	-$53.0	+$373.3 (4h/4h, SOL+XRP, 32 cls)	34	neighbour +$426.2
preset bc2	M30	-$79.4	+$973.3 (1d/4h, SOL+XRP, 30 cls)	34	neighbour +$1,052.7
preset 4h4	WK	-$62.1	-$38.9 (4h/1h, BTC+ETH, 2 cls)	19	neighbour +$23.2
preset 4h4	M30	-$477.4	+$84.6 (1d/1d, ETH+SOL, 1 cls)	19	neighbour +$562.0

In **4 of the 4** preset-window cells with a grid, a one-knob neighbour beat the configuration as it is actually running. The largest single edit is preset bc2's 1d/1d -> 1d/4h horizon move on M30, which turns -$79.4 into +$973.3. The presets are not at a local optimum -- a testable, low-risk edit, unlike adopting a search champion wholesale. Cell counts are small (34 and 19 per window) and every neighbour is an in-sample maximum of its own little grid.

Patterns: what the finalists look like

Knob modes across each window's unique finalists (mature net top-10 per branch plus all four quality boards, deduplicated by full signature; 53 unique configs on WK, 43 of them councils; 53 on M30, 29 councils).

Knob	WK finalists mode	M30 finalists mode
Forecast horizon	4h (47/53)	1d (53/53)
Ladder shape (steps)	50:40,100:60 (53/53)	50:40,100:60 (52/53)
Break-even stop (BE)	on (53/53)	on (53/53)
Min confidence	60 (53/53)	60 (47/53)
SL shift	75 (53/53)	75 (52/53)
TP shift	-10 (53/53)	-10 (52/53)
TP/SL source	farthest (48/53)	farthest (38/53)
Calibrate ON	9/53	29/53
Universe	SOL+XRP (23/53)	SOL+XRP (39/53)

The mechanical core is the same on both windows and unchanged for the fourteenth issue running: 50:40,100:60 ladder, break-even on, conf 60, SL +75 / TP -10, farthest source. The horizon is **4h** on WK (47/53) and **1d** on M30 (53/53). **Calibrate=ON** runs in 9 of 53 WK finalists against 29 of 53 on M30, where issue #13 measured 14/39 on its week and 9/40 on its month. The universe: SOL+XRP takes 23 of the 53 WK finalists while SOL+XRP takes 39 of the 53 M30 finalists. Membership concentrates too -- opus leads the WK council finalists (40 of 43) and gpt the M30 ones (29 of 29). Standing caveats: refinement seeds from the same grid winners, so part of the convergence is search-design echo; and a knob core that produced 7-of-79 survival one issue ago and 24-of-87 this issue is describing the weather, not a recommendation.

Liquidation note

Liquidation is modeled by the engine at the fixed 10x leverage used throughout. Across the published cards, stop-loss placement stays inside the distance that would approach the liquidation threshold; maxDD is printed on every config so realized risk is visible directly. This issue the published cards draw down 4.7% and 0.0% on the week and 27.7% and 0.0% on the month, and the replay table is deeper: 12 replayed rows drew down more than 40% on the week and 52 on the month, 6 and 39 of them past 55%. A high headline net and a survivable path are different claims, and so are a shallow in-sample drawdown and a shallow one next week.

Watch amendments (this issue)

Amendment 3 (standing) -- smoothness and a quality composite. Every simulation stores its daily closed-equity series and the three numbers read off it (n_days, smooth_r2, ulcer); the smoothness board ranks mature rows with net > 0 and at least 5 days by R2 with ulcer as tie-break, and the quality composite ranks by the mean of the net, Calmar-like, win-rate and R2 ranks. Both still cost zero additional simulations and the headline board is still net PnL.

Amendment 4 (standing) -- the monthly split. The weekly Config Watch keeps two windows, the calendar week (WK) and the four calendar weeks that end at the same edge (M30, Oct 12-Nov 9, 2026); the calendar-month board belongs to the Monthly Config Watch line and no calendar-month number is printed in a weekly issue. This issue's night collect computes no calendar-month window at all: calendar October belongs to Monthly Config Watch #3, published Nov 5, and Q3 2026 to Quarterly Config Watch #1, published Oct 9, whose 3 cards are on the walk-forward table here.

Amendment 5 (standing) -- the standing OOS board grows with every issue. Every card this series publishes joins the walk-forward table and is never removed: this issue replays **87 cards** -- Monthly Config Watch #3's 3 and issue #13's 5 join issue #12's 5, issue #11's 5, issue #10's 5, Quarterly Config Watch #1's 3, issue #9's 5, Monthly Config Watch #2's 3, issue #8's 5, issue #7's 5, issue #6's 5, issue #5's 4, issue #4's 5, Monthly Config Watch #1's 3 and issues #1, #2 and #3's 26 -- plus the four live presets, on both fresh windows. **Monthly and quarterly cards are judged by the weekly rule** (net-positive on both of this issue's fresh windows), the same rule every other row is judged by; their own calendar-month or calendar-quarter origin window is the Home column and nothing else. One consequence for the counts: a survival share is computed on a board that changes size every issue, so it is reported with the cohort breakdown beside it and never as a trend on its own. **Stability** is defined inside the run that computes it: this issue's night collect computes WK and M30, so the board reads across WK and M30 -- the issue-#3 definition, the one issues #5, #6, #7, #8, #9, #10, #11, #12 and #13 used as well -- where issue #4's read across M30 and the calendar month.

All three amendments are standing, provisional and scoped to this series. **Formalization is slated for methodology v1.2**; until then this issue runs on v1.1 plus the Config Watch amendments approved 12.08 (hash e66c7e8c864a2233).

Limitations

- **Two windows, one regime, and they overlap.** M30 (Oct 12-Nov 9, 2026) contains WK (Nov 2-9, 2026) -- 7 of the week's 7 days are inside it -- and it shares 21 of its 28 days with issue #13's own M30 window (shared stretch Oct 12-Nov 1), 14 of its 28 days with issue #12's own M30 window (shared stretch Oct 12-25), 7 of its 28 days with issue #11's own M30 window (shared stretch Oct 12-18) and 20 of its 28 days with Monthly Config Watch #3's calendar-October window (shared stretch Oct 12-31). The two columns of this issue are therefore not two independent tests: agreement between them is partly arithmetic, and for the issue-13, issue-12, issue-11 and Monthly-3 cohorts the M30 replay column is decay context rather than pure out-of-sample. Do not read them as a cross-validation.
- **The two windows come from two collects, and the two runs of the same week do not agree.** WK is the weekly run (generated 2026-11-11T03:33:29Z), M30 the night run (generated 2026-11-11T03:38:06Z), which recomputed the same WK week in the same pass on its own grid: the night run's WK ceiling is +$460.8 (gpt, grok on BNB+XRP) against the weekly collect's +$538.1. Every WK number this issue prints is the weekly collect's; the night run's WK half is used only for the cross-window stability board. Same engine, same criteria, same collect code, but not the same execution -- a number is comparable across the two windows only as far as that is.
- **Stability is defined inside the run that computes it.** The board comes from the night run, whose two windows are WK and M30, so it reads across those two -- and 4 configurations are in the mature net top-40 of both. Issue #13 read the same pair one week earlier and held 0, issue #12 the week before that held 1, issue #11 0, issue #10 4, issue #9 7, issue #8 4, issue #7 16, issue #6 9, issue #5 0 and issue #3's board (the other one across the same pair) held 21; issue #4's 25 is not comparable at all, having been measured across M30 and the calendar month. A board this size is one observation per issue and no claim is made from a single reading.
- **Model lineage is a splice.** Three model axes run as lineages (claude-opus-5.5 (incl. opus-5-era), gpt-6.1-sol (incl. 5.6-era), grok-4.7 (incl. 4.6-era)) across the cutover at Oct 17, 2026 09:01 UTC, which lies inside this issue's M30 window (Oct 12-Nov 9, 2026, day 6 of 28) and before its WK week (Nov 2-9, 2026): every WK number in this issue is a single-build week on the new ids, every M30 number joins the two builds of each line under one id; every published card that named a superseded id is replayed on the lineage head ([remap] rows: 57 of the 91 rows -- 53 of the 87 cards (by cohort issue-10 5 of 5, Quarterly-1 2 of 3, issue-9 4 of 5, Monthly-2 2 of 3, issue-8 4 of 5, issue-7 4 of 5, issue-6 5 of 5, issue-5 3 of 4, issue-4 3 of 5, Monthly-1 1 of 3, issue-3 4 of 6,

issue-2 7 of 8 and issue-1 9 of 12) and all four live presets), and a remapped replay is not the same simulation the origin issue ran. The grok 4.5 -> 4.6 cutover of 2026-08-24 lies entirely before both windows.

- **The cutover hours.** The two roll-out slots of Oct 17 (07:01 and 08:01 UTC; invalid rows for the three superseded ids, council of four in those hours) fall inside the M30 window and outside the WK week.
- **Calibrated replays are pinned to their origin point.** 17 replay rows carry calibrate=1 with the calibration point fixed in their stored query (calibrate_asof: 2026-08-25, 2026-09-01, 2026-09-07, 2026-09-14, 2026-09-15, 2026-09-21, 2026-10-01, 2026-10-06, 2026-10-20, 2026-10-26, 2026-11-02, 2026-11-03), so their TP/SL multipliers are the ones in force when the origin issue was computed -- including the cards signed with the pinned date at publication: issue-12 cw12-wk2 (Oct 26, 2026), issue-13 cw13-m302 and cw13-wk1 (Nov 2, 2026) and Monthly-3 cwm3-m1 and cwm3-m2 (Nov 3, 2026); up to issue #11 a calibrated replay used the live point of the day it ran. The rows: cw11-m302, cw12-wk2, cw13-m302, cw13-wk1, cw3-m302, cw4-wk2, cw5-wk1, cw5-wk2, cw6-m302, cw6-wk2, cw7-m302, cw9-wk2, cwm1-m2, cwm2-s1, cwm3-m1, cwm3-m2, cwq1-q2. For the twelve older rows the week-over-issue trajectory changed method once, at issue #12.
- **Concentrated rows are published, not hidden.** 4 rows run stakes above this issue's cap for their universe size and are marked [conc] (preset_sol, preset_xrp, cw2-30d1, cw2-30d2); their printed economics assume funding the current rule would not grant. They stay in the table because removing them would flatter the preset row.
- **The stake rule changes what runs, not only its size.** Capping the stake changes WHICH entries get funded: the seven table-stake solo defaults skip 99 to 322 entries each, and 44 replay rows carry unfunded entries (up to 26 on cw1-7ds1). Where skipped_nofunds is non-zero the printed economics are not the economics that ran; the rows are flagged, never silently pooled.
- **Snapshot principle.** This report is a frozen snapshot taken at the generated-at timestamps; numbers are not updated retroactively and past issues are not restated. The drift baseline exists because a re-run does not reproduce every past number; the widest this issue (cw12-wk1: +$580.5 printed, +$457.9 today) is a card with positions still open when its origin window closed, and such a card re-runs to its settled result.
- **Research-to-date counter is pinned.** The counter below is pinned from wave 3 onward and is read at the Nov 9, 2026 16:00 UTC cut-off; issue #13 printed 82,895 resolved and 66 published reports against 87,760 and 74 here. The model line keeps the definition issue #4 introduced (7 tracked, current line-up; earlier versions folded into their successors' lineage), so the eleven issues' model counts are comparable and issue #3's is not.
- **No calendar month in this issue.** The night collect computes M30 and WK and nothing else, so no claim about a calendar month is made anywhere here. Monthly Config Watch #3 published Nov 5 and Quarterly Config Watch #1 Oct 9; calendar November belongs to Monthly Config Watch #4. Monthly Config Watch #3's 3 cards, Quarterly Config Watch #1's 3, Monthly Config Watch #2's 3 and Monthly Config Watch #1's 3 appear in this issue only as replay rows, judged by the weekly rule.
- **Provider incident inside the windows.** Weekly Model Watch #14 records a provider incident inside both windows: on Nov 5, 46 of qwen-3.8-max's 210 forecasts were rejected by the provider (input-moderation error) and are absent from the slots every replay on WK and M30 reads; 2 forecasts on Nov 7 were produced without the news block.
- **Multiple testing.** 15,952 simulations across the two collects (5,478 weekly + 10,474 night); at this scale some winners are expected from chance alone. Antidotes: axes frozen before launch, the walk-forward table, independent baselines, in-sample labeling. No formal correction yet.
- **Winner's curse and thin cells.** Every card, board row and per-ticker best is the maximum of a search, biased high by selection alone. On the week the per-ticker winners closed 2-29 trades and 44 of the 91 replay rows are under 10 closed; on the four weeks 4 replay rows are thin and 1 per-ticker winner is. Flagged with *, reported for completeness.
- Research output, not financial advice.

Counters & lineage

Weekly collect (WK window)

Stage	Sims	Stage	Sims
Scan (s1)	476	Dedicated per-ticker (s6t+s6tc)	555
Systematic grid (s2)	4,048	OOS replays (s4cw13+s4cw13o+s4cwm3+s4cwm3o+s4cw12+s4cw12o+s4cw11+s4cw11o+s4cw10+s4cw10o+s4cwq1+s4cwq1o+s4cw9+s4cw9o+s4cwm2+s4cwm2o+s4cw8+s4cw8o+s4cw7+s4cw7o+s4cw6+s4cw6o+s4cw5+s4cw5o+s4cw4+s4cw4o+s4cwm1+s4cwm1o+s4cw3+s4cw3o+s4cw2+s4cw2o+s4cw1+s4pre)	166
Refinement: ladder + stake sweep (s2b+s3b)	120	**Total**	**5,478**
Preset neighbourhood grid (s2p)	53	Errors / zero-trade	0 / 1,739
Per-ticker probes (s5t)	60	Engine	1.1

Night collect (M30 and a second execution of the WK week; this issue publishes M30 from it, and its WK half feeds the cross-window stability board only)

Stage	Sims	Stage	Sims
Scan (s1)	952	Dedicated per-ticker (s6t+s6tc)	1,085
Systematic grid (s2)	7,712	OOS replays (s4cw13+s4cw13o+s4cwm3+s4cwm3o+s4cw12+s4cw12o+s4cw11+s4cw11o+s4cw10+s4cw10o+s4cwq1+s4cwq1o+s4cw9+s4cw9o+s4cwm2+s4cwm2o+s4cw8+s4cw8o+s4cw7+s4cw7o+s4cw6+s4cw6o+s4cw5+s4cw5o+s4cw4+s4cw4o+s4cwm1+s4cwm1o+s4cw3+s4cw3o+s4cw2+s4cw2o+s4cw1+s4pre)	257
Refinement: ladder + stake sweep (s2b+s3b)	246	**Total**	**10,474**
Preset neighbourhood grid (s2p)	106	Errors / zero-trade	0 / 2,333
Per-ticker probes (s5t)	116	Engine	1.1

Scale note (vs issue #13). Issue #13 ran 15,965 sims over two windows in two collects; issue #14 runs 15,952 over two windows in two -- 5,478 in the weekly collect (WK) and 10,474 in the night collect (M30 and the same WK week together). The per-window grid is close to unchanged: 4,048 WK cells and 3,856 M30 cells here against 3,952 WK and 3,920 M30 cells there. The per-coin branch is 555 and 1,085 against 565 and 1,050. The replay branch grew in rows (91 configs against 83) and in sims (166 and 257 against 150 and 233), because two more cohorts joined and every row is replayed on every window of its collect. The two selection boards still cost zero simulations.

No extras pass in either collect. Equity series, the grid histograms (0 extra sims), the baselines and the calibrate packs are produced by the same two collects that wrote the boards. The baseline runs are verification, outside both search totals: 22 sims on WK (11 configs x 2 stake modes) and 44 in the night collect, of which the 22 M30 rows belong to this issue. 0 equity replays were needed. **Model lines in these windows.** Seven lines; three are lineages spliced at the cutover of Oct 17, 2026 09:01 UTC, inside M30 and before WK: claude-opus-5.5 -- claude-opus-5 rows until Oct 17 08:01 UTC, then claude-opus-5.5 from 09:01 (M30: 1,155 + 4,725 rows; WK: 1,470 rows, all under claude-opus-5.5; succession claude-opus-5, claude-opus-4.8); gpt-6.1-sol -- gpt-5.6-sol rows until Oct 17 08:01 UTC, then gpt-6.1-sol from 09:01 (M30: 1,155 + 4,725 rows; WK: 1,470 rows, all under gpt-6.1-sol; succession gpt-5.6-sol); grok-4.7 -- grok-4.6 rows until Oct 17 08:01 UTC, then grok-4.7 from 09:01 (M30: 1,155 + 4,725 rows; WK: 1,470 rows, all under grok-4.7; succession grok-4.6, grok-4.5). The other four lines (claude-fable-5, deepseek-v4-pro, gemini-3.1-pro, qwen-3.8-max) carry one id each.

Generated at: 2026-11-11T03:33:29Z (weekly collect) and 2026-11-11T03:38:06Z (night collect) · Methodology v1.1 + Config Watch amendments (approved 12.08), hash e66c7e8c864a2233.

Snapshot principle: this report is a frozen snapshot of the search taken at the generated-at timestamps above; numbers are not updated retroactively. Each issue re-runs the pipeline fresh over that issue's windows.

Research to date

RESEARCH SNAPSHOT

THIS REPORT -- search effort: 15,952 simulations (0 errors) across two frozen collects, of which 423 walk-forward replays and origin re-runs · 66 verification sims (baseline runs inside the same collects; 0 equity replays needed)

MARKETMANIA RESEARCH TO DATE (as of cutoff): 87,760 directional forecasts resolved since Jul 11 (as of Nov 9, 2026 16:00 UTC cutoff) · 7 models tracked (current line-up; earlier versions folded into their successors' lineage) · 5 assets · 5 horizons · hourly · 74 published reports

Counter pinned from wave 3 onward and read at the Nov 9, 2026 16:00 UTC cut-off: issue #13 printed 82,895 resolved and 66 published reports. The model line keeps the definition issue #4 introduced (7 tracked, current line-up; earlier versions folded into their successors' lineage), so the eleven issues' model counts are comparable. Config Watch #14 is the 74th published report.

Issue #14. The standing walk-forward board reaches 87 cards -- issue #13's 5 and Monthly Config Watch #3's 3 join it, and monthly and quarterly cards are judged by the weekly rule (Amendment 5). Two fresh windows again, the calendar week and the four calendar weeks ending at the same edge, both computed in the night collect as well as the week: the table keeps 24 of 87 past cards where the week alone keeps 39 and the month alone 34. The cross-window stability board is measured on this issue's own two windows (WK and M30) and comes back with **4** configurations. Formalization of the amendments is still slated for methodology v1.2.

What we're testing next

- **The first fresh week of this issue's own cards.** Config Watch #15 replays the 5 cards published here that carry a short link (both WK councils, WK solo #1, both M30 councils; WK solo #2 and the M30 solo card have no link and are not replayed, as issue #13's two unlinked solo cards were not) on its own fresh week, alongside the 87 already on the board. The number to check against: 60.0% of issue #13's 5 linked cards were net-positive on their first fresh week, which is this issue's week.
- **Whether the WK-and-M30 stability board reads the same twice.** 4 configurations are in the mature net top-40 of both windows of this issue's night run, against 0 on issue #13's board, 1 on issue #12's, 0 on issue #11's, 4 on issue #10's, 7 on issue #9's, 4 on issue #8's, 16 on issue #7's, 9 on issue #6's, 0 on issue #5's and 21 on issue #3's, all across the same pair. Config Watch #15's night run computes the same pair one week on, so the question is whether the count moves when the windows do.
- **What the calibrate share reads on a twelfth window.** Calibration improves 14.0% of the 1,382 matched WK pairs and 23.0% of the 1,288 M30 pairs this issue, against 56.8% and 40.8% in issue #13. The test is the same two measurements on the next pair of windows -- the whole grid and the board-leader slice, reported separately and never pooled.

Monthly Config Watch #3 -- https://marketmania.ai/research/reports/config-watch-monthly-2026-10.pdf

The three weekly reports publish together as one issue each week; Config Watch follows its own cycle. Market-regime figures, where this issue refers to them, come from that wave and are not re-tabulated here. Monthly Config Watch #3 is listed because its 3 cards join the walk-forward table above.
